

Add-On Software to Improve Processes and Quality Control for IBM Maximo

Optimized

- Integrates with Maximo MBOS
- Uses Industry Standard Microsoft Office Applications to modify data
- Works with Maximo V.6 and higher
- Performs actions including physical count, adjustments and status updates

Reduces Risks

- Decreases data entry time
- Provides repeatable process
- Reduces errors

Achieves Compliance

- Audits changes to records
- Support for e-Signature
- Provides review mode to verify data prior to committing

Bulk Record Import and Export for IBM Maximo

The BRIE application was designed exclusively for the IBM Maximo Enterprise Asset Management. Using Maximo Business Logic rules, BRIE leverages industry standard tools to ensure data integrity throughout the import and export process. The migration of the data is secure, keeping the data clean and validated.

BRIE is an essential tool for projects requiring you to extract, transform and load data for IBM Maximo. By automating the process, time spent entering data is minimal and the margin for error significantly decreased. BRIE has been successfully utilized in system upgrades, plant relocations, data migrations from 3rd party systems and information sharing with external vendors.

BRIE is part of the Xybion Asset 55000 suite of solutions for Governance, Risk, and Compliance for Asset Management.

Key Features

- Data Loader exclusively built for IBM Maximo.
- Provides a repeatable and verifiable process.
- Integrates IBM Maximo with MS Office.
- Configurable for user defined objects.
- Uses IBM Maximo Business Logic Rules to ensure business object data integrity.
- Designed for end users to perform extraction, transformation and loading using industry standard tools.

Features and Benefits

- Supports Maximo user login authentication including LDAP
- Supports Industry Standard Browsers including Internet Explorer and Chrome
- Allows access to Maximo objects and data based on Maximo User Security Profile
- Allows users to filter records to be exported including support of Maximo user-defined queries
- Allows for processing of import and export jobs offline, allowing users to perform other activities while records are processed
- Datasets are created in Microsoft Access database format
- Users are able to utilize industry standard applications such as Microsoft Excel and Microsoft Access to perform data transformation utilizing the advanced features of those tools
- BRIE includes a data validation mode that allows for data to be checked for errors and other business object integrity issues before being committed to the database
- BRIE performs error checking for the entire data set being loaded and informs the user of any issues for the entire batch
- All changes are documented in the data set import log file including the user id, date/time stamp and the before and after values.
- Configurable as needed to add/modify data objects.
