

The Leading Digital Workplace Solution

Key Features

Closed Loop

The product offers a closed-loop process to effectively manage Corrective Actions Preventive Actions (CAPA), and integrates with other processes deemed critical for regulatory compliance. This involves automation of prescribed actions such as document management, non-conformance management, compliance management, audits, deviations and investigations.

Transparent

CQRM XD Credana's automated approach helps businesses to have full control and real-time transparency over their critical activities, including monitoring of compliance procedures, end user companies' documentation along with managing approvals, thus shortening the cycle of corrective actions.

Flexible, Scalable and Configurable

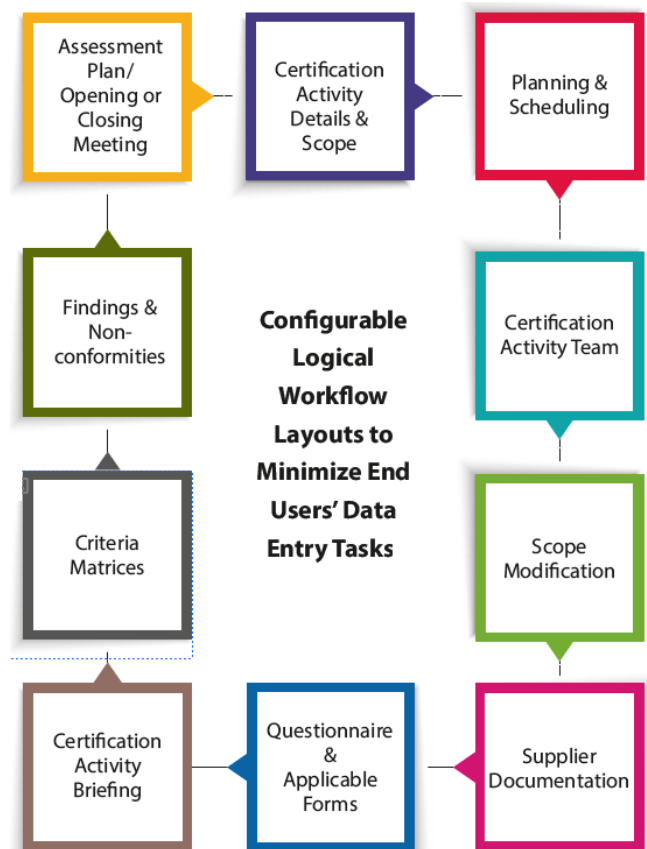

The platform offers a building block approach that facilitates the creation of applications for the global accreditation industry. CQRM XD Credana is a highly configurable solution to help manage business processes, create new applications and customize the tools that suit your needs.

Manage and Track

With CQRM XD Credana, it is now easy to manage all types of stakeholders, including customers, partners, external contractors and various governing bodies.

Xybion's CQRM XD Credana is the leading digital workplace solution providing end-to-end process management to automate and simplify the complex process of accreditation, recognition and auditing programs, including the Medical Device Single Audit Program.

CQRM XD Credana is a closed loop business management platform which allows the accreditation agencies, and internal and contracted assessors/auditors to participate in a secure and single cloud-based solution. This is carried out throughout the lifecycle of the quality, compliance and certification processes. Ideally designed for multinational, multilingual and multi partner work environments, the cloud-based web solution, CQRM XD Credana, provides a robust platform with vigorous functionality which allows interconnectivity with other systems and within its own workflows.

Key Benefits

- Seamless integration with the internal business processes & external stakeholders
- Managing the entire life-cycle of accreditation and certification processes
- Incorporation of easy feeding and migration of data
- Retiring of disparate workflows
- Increased efficiency in planning and scheduling
- Efficiency in scope reporting
- Consistent methodology for processing assessments
- Better efficiency due to information kept in the same database from year to year
- Greater transparency of the current snapshot of the state of the accreditation program
- Increased accuracy by integration with extra systems and offline toolkit, thereby reducing the need to redundantly type in data
- Processing and implementing demanding number of customized applications leveraging the scalable and extensible platform

CQRM XD Credana Software

- Creates and controls business-centric forms
- Creates a list of values allowing interoperability between internal workflows and external systems.
- Can reuse the values in multiple places throughout the system for ease of long-term maintenance
- Manages and Triggers Workflows, Tasks, Events and Changes, allowing collaborative work without system constraints
- Embeds Digital Content Management System supporting all file types
- Allows Auditors and Assessors to work securely while visiting customers and other third-party organizations in the online workplace
- Generates automated official and formal reports
- Increased accuracy by integration with extra systems and online toolkit, thereby reducing the need to redundantly type in data
- Processing and implementing demanding number of customized applications leveraging the scalable and extensible platform

AUTHENTICATION:

Customers' needs driven Authentication capabilities are built-in. LDAP, SAML and modern OAuth are easily set up on servers and root DN for various databases and mail settings.
